Enterprise Impact

Partner with Bently Nevada and bring clarity to your enterprise operations

Reimagining the way that people, machines, and data come together

Digital technology and the Industrial Internet of Things (IIoT) are dramatically impacting the way processes are managed, operated, and maintained. A second Industrial Revolution is underway and the future belongs to the companies that tap into the flood of available new data. To gain the competitive advantage, you need a partner who will not only help navigate these new capabilities, but will also prepare your operation for even greater technical advances. Bently Nevada is ready to be that partner.

By combining a legacy of deep machine knowledge with the vision of the digital IIoT, Bently Nevada can provide a connected view of your industrial operations.

A unified view of your operations to increase visibility for better decision making

• With 10 to 12% of capital expenditures spent on unplanned—or reactive—maintenance each year, it is critical that your maintenance strategy becomes more proactive. System 1 Enterprise Impact provides a secure and unified fleet view of machines, combining the rich vibration and process datasets from System 1. This scalable, intuitive, and secure solution connects multiple solutions into one simple web-based platform—synthesizing your events and priorities—allowing you to make better decisions while you focus on bad actors.
Designed for maximum productivity

Most operations do not have the resources to constantly monitor all of their machine and process data, and now they don’t have to. Enterprise Impact was built with usability and efficiency in mind. Its intuitive interface enables you to easily identify problems and act when required, from anywhere.

Simple

With a clean interface, navigation is now easier than ever before. Enterprise Impact provides you with the information to make informed operational decisions.

• Aggregate data from multiple System 1 sources for a comprehensive view of machinery health
• Prioritize machine health issues across multiple enterprises
• Access static trend data before and after an alarm—with just one click
• Combine trend data from multiple System 1 sources within a single plot view
• View waveform data closest to an event and navigate through all waveforms, if dynamic data available
• Perform first-line data review and determine whether deeper diagnostics within System 1 are required
• Allow your workforce to focus on fixing problems, not looking for them

Scalable

Enterprise Impact is an easily scalable solution and works for customers of any size without scaling the ability of the technology. Connect and view multiple System 1s within a unified environment.

Cybersecure

Combine key data sources across your enterprise, without having to worry. Enterprise Impact works remotely and offers users a single, safe access point to monitor machine health. It also addresses IT concerns with AMQPS protocols and read-only proxy connections.

Continue your journey from reactive to proactive with Bently Nevada

System 1 Enterprise Impact is just one way that Bently Nevada is transforming industry by connecting people, machines, and data. To learn how to partner with Bently Nevada to continue your digital journey, go to bently.com or follow us online on LinkedIn.
